

the THORENS

family of fine turntables . . . finest for stereo or mono

TD-124 . . . World's finest turntable for home-music systems

Unique design, and an unparalleled combination of features make the TD-124 unbeatable for true-to-life stereophonic sound. No other turntable is quite like the TD-124; and no other can equal its performance.

Actual comparative tests of the TD-124 and six leading competitive turntables, four of which cost up to \$30 more, showed that the TD-124 has 3db less rumble than the best of these. Examine the mirror-finished precision machining under the TD-124's table — particularly the shaft and bearing — compare these to other tables and you'll see why.

FEATURES

Twelve-inch, 11½ pound table (outweighs 16" aluminum tables) for lowest wow and flutter. Precision-machined, 4-speed, Thorens Roto-Drive, is adjustable ($\pm 3\%$) for exact musical pitch. Attains full speed within $\frac{1}{8}$ rev., despite weight of main table, because of exclusive Thorens clutch. Clutch also allows starts with stylus resting on record for long noise-free record life. Main table of cast iron provides magnetic shielding against hum for pickup, and light aluminum cover table, plus attractively styled rubber mat, prevents attraction of magnetic pickups. Built-in illuminated strobe allows setting to exact speed while record is playing. Built-in level-bubble and easily accessible leveling device make it easy to keep table level.

Precision 4-pole motor with extra compliant belt-plus-idler provide complete motor vibration isolation. Provision for changing arms

without leaving unsightly marks — just replace low-cost mounting board, available for either 12" or 16" arms in various finishes. After mounting, arm becomes an integral part of the turntable and is automatically leveled when unit is leveled.

Easy to install: The TD-124 requires only 2¾" clearance below top of mounting board. Dimensions: 15½" wide x 12¾" deep with 12" arm-mounting board. Furnished with line cord and solderplate. Operates on 50- or 60-cycle ac, any voltage from 100 to 250 volts.

Accessories for TD-124

	Net
WBTD Wooden base (walnut, blond or mahogany)	\$9.00
MB-TD Mounting board, unfinished	4.50
AS-12 12" tone-arm board (walnut, blond, mahogany, black)	3.00
AS-16 16" tone-arm board (walnut, blond, mahogany, black)	3.75

The outstanding changer for stereo hi-fi

CD-43NS gives you more operating features than any other changer, plus superlative speed constancy and silence. Arm wired for stereo. Plays 12", 10", and 7" records; intermixes automatically 10" and 12"; will replay any record size. Has control for manual operation. Includes pause and reject control, permitting intermediate record reject plus adjustable pauses between the records on the stack. 3 speeds. Automatically shuts off after last record is played. Adjustable speed — speed selector has integral fine-tuning knob for "exact pitch" adjustment. Rugged 4-pole direct-drive motor with cast-iron frame and mechanical filter to reduce rumble content. Operates on 50- or 60-cycle ac, any voltage from 100 to 250 volts.

TDK-101 . . . a "TD" turntable in kit form

Here's top value, plus top turntable performance, for the music lover who likes to put things together. The TDK-101 is a precision-crafted Thorens transcription turntable in kit form, can be quickly assembled using only common household tools. Yet you get the same fabulous machining you get on the higher priced Thorens TD units. Just compare the main turntable shaft machining on the Thorens with that of any other make and you'll see why the Thorens runs quieter, has less wow, rumble, and flutter.

FEATURES

Same basic drive as on more expensive TD units, but single speed, 33 1/2 rpm; ultra-compliant belt, plus extra-large idler, provides complete motor isolation and constant-speed operation. Mirror-finish machining on all critical working parts — particularly the main bearing shaft — and single ball-thrust bearing (retained so it can't get lost) insure lowest wow, rumble and flutter. Adjustable speed ($\pm 3\%$, a total of about one musical semitone) while record is playing. Built-in strobe disc allows setting to exact speed. Idler automatically disengaged when unit is switched off. Drive mecha-

nism is completely enclosed; there are no external "string" belts or belt shields. Operates on 115-volt, 60-cycle ac. (50-cycle adapter available.)

WBK Base, walnut, blond or mahogany Net \$9.00

TD-184

**Superb TD quality
Dial-O-Matic convenience**

TD-184 is a four speed turntable with integral arm, wired for stereo. It features same basic precision-machined, adjustable speed drive as the TD-124 transcription turntable. Semi-automatic operation —

one dialing motion selects 7", 10" or 12" record size, starts table, and arm literally floats down on air into the first record groove. Adjustable air-damping piston controls lowering speed of arm. Absolutely no connection between arm and table during playing. Featherweight position-trip shuts off player at end of record, idler is automatically disengaged, and arm lifts. Manual-reject control permits shut-off, interruption to playing (with resumption at same point if desired) or completely manual operation. Turntable floats on nylon-seated ball thrust-bearing for absolute minimum wow, rumble and flutter. 2-gram arm tracking and resonance under 17cps equals or exceeds performance of much higher-priced separate arms; five pronged plug-in adapter accommodates all standard stereo or monaural cartridges. Dimensions: 15" wide by 12" deep; extends only 2 1/2" below panel, 3" above. The tone-arm does not extend beyond the base-plate at either back or side, making this unit an ideal replacement where space is at a premium. Operates on 50- or 60-cycle ac, any voltage from 100 to 250. Furnished with line cord and two shielded pickup cables.

TD-134

A TD for maximum performance outstanding economy

This 4-speed manual turntable is the biggest value on the market. The TD-134 features integral arm, wired for stereo, and turntable exactly like TD-184 except that semi-automatic features have been omitted to save you money. Same precision adjustable speed drive, same mirror-finish machining, same high-performance arm — an outstanding value for the budget-minded hi-fi enthusiast.
